Penjelasan

Pertama, lakukan Nmap di google.com dan paket tersebut masuk dan dianalisis dengan wireshark.

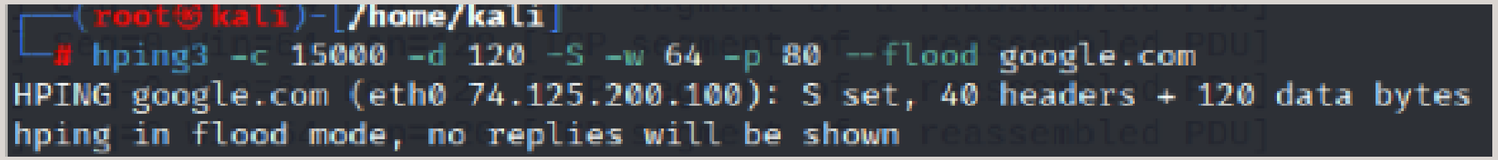
Penjelasan

Metode yang ingin kita lakukan adalah SYN/ACK Flood, dimana kita melakukan flood kepada google.com dengan banyak ping yang sudah di dalam command hping3. Command dibawah ini adalah untuk melakukan flood kepada google.com 1500 kali selama 120 milisekon dengan packet 64 bit



SYN/ACK FLOOD google.com

Hasil

Tujuannya sukses karena google.com telah di flood dengan ping-ping yang bersifat untuk menaklukan servernya, seperti yang kita bisa lihat itu sukses karena google.com memiliki banyak sekali ping-ping yang tidak ada maknanya.

Conclusion

Dalam singkatnya, Nmap adalah perangkat pemindaian jaringan yang sah digunakan untuk mengevaluasi keamanan, sementara serangan TCP SYN/ACK adalah upaya jahat untuk menaklukkan server dengan memanfaatkan langkah-langkah protokol handshake TCP. Meskipun penggunaan Nmap tidak bermaksud jahat, alat ini bisa dimanfaatkan untuk mengumpulkan informasi sebagai persiapan sebelum melancarkan serangan.
